Update to Non-MPK Knee Offering for Hanger Score

Hanger Clinic, in collaboration with Hanger Supply Chain, is pleased to announce the updated Hanger Score offering for Non-MPK Knees. This selection was based upon a retrospective analysis of utilization, clinical efficacy, and a competitive sourcing process.

Under the leadership of Phil Stevens, MEd, CPO we assembled a panel of fifty (50) respected, high volume Clinical Prosthetists from across the country to assess and rate a broad range of non-microprocessor knees currently available to the U.S. Market. These clinical ratings formed the foundation for the decision-making process.

Ultimately, the selected knees represent a composite consideration of clinical performance, historic utilization and pricing, and satisfy the clinical, service, and overall quality standards that are required to be a part of Hanger Score.
